Software Developer with 3.5+ years of experience at Increff, leading the development of scalable systems and performance-driven features. Proficient in Kubernetes, CI/CD, and workflow automation to streamline development and reduce manual effort. Adept at debugging distributed systems, optimizing sprint delivery, and building internal tools that enhance team productivity, agility, and overall system reliability.

Experience

Software Developer Engineer-2 | Increff | Bangalore | 2024 (SEPT) – PRESENT

- Kubernetes Migration & System Re-architecture:** Migrated all services from WAR-based Tomcat deployments to containerized images for Kubernetes (GKE), enabling cross-environment consistency and local testing via Docker. Refactored in-memory caches to distributed Hazelcast clusters, moved session management to DB-backed sessions, and migrated internal jobs to an external scheduling service (Chakra), achieving zero-downtime deployments and reducing cloud costs by ~30%.
- Version Tracking Automation:** Developed a version tracking automation that scrapes deployed pod versions across client clusters, centralizing visibility of service rollouts and enabling rapid identification of clients on bug-affected builds — eliminating the need for manual inspection across deployments.
- Scheduler Service Re-architecture:** Re-architected the internal scheduling system using Spring Boot to integrate with Chakra, supporting 12.5K+ concurrent jobs across distributed services and enabling scalable and resilient event-driven processing across all major products.
- Sprint Ownership & Feature Delivery:** Led feature delivery for Sprint 78–80 across services, implementing complex flows like perishable SKU handling, reverse logistics (returns without forward orders and expected return flags), and multi-seller listings — increasing coverage of marketplace-specific edge cases.
- Vendor Management Phase-2:** Designed and implemented phase-2 of the vendor management system to expose inventory from manufacturer-owned warehouses directly to marketplaces, unlocking new business pipelines and enabling real-time sync from non-merchant locations.
- Developer Efficiency & Sprint Agility Initiatives:** Created a local mock server system and dynamic init.sql-driven data seeding tool to eliminate repetitive sprint setup time. Additionally, built a configurable Docker-based setup to auto-pull production images or generate local builds, reducing testing prep time and saving ~17 hours per developer per sprint (~21% total Dev+QA cycle time).

Software Developer Engineer-1 | Increff | Bangalore | 2022 (June) – 2024 (AUG)

- Developed Core Fulfillment Features (ASN, Order Hopping, Combos):** Delivered key platform features including Advanced Shipment Notice (ASN), virtual combo SKUs, item-wise manual allocation, and order hopping — product-driven enhancements that enabled dynamic order fulfillment, contributing to onboarding new Middle East clients like AKG and Stylii.
- Scaled Inventory Sync Throughput via Multithreading:** Refactored inventory synchronization system using Java concurrency and batched MySQL operations, increasing processing throughput from 30K/min to 2L/min — improving real-time stock accuracy and eliminating lag during peak loads.
- Reduced DB Cost & Improved Audit Visibility via Elasticsearch Migration:** Migrated voluminous audit logs from MySQL to Elasticsearch with TTL-based eviction (~1 month), enabling faster search for support and compliance workflows while cutting infra cost by ₹3.45L/month.
- Downtime Minimization Through DB Migration Strategy:** Reduced schema migration downtime from 2 hours to 30 minutes by shifting from timestamp-based to ID-range-based data partitioning. Designed pre-migration scripts for static data and minimized locking during production cutover on MySQL.
- Introduced a Flow Layer for Modular API Architecture:** Designed a reusable flow layer within CIMS to decouple business logic from controllers and services — enabling faster API development, better test coverage, and a ~40% reduction in logic duplication across the codebase.

Skills Tech-Stack	Spring • Spring-boot • Hazelcast • MySQL • Java • Python • Kubernetes • ELK • H2-DB • Jenkins • JFrog • Google Console • Python • ArgoCD • Tomcat • Docker • BitBucket • N8N		
	Mentoring Juniors • 150+ Code Reviews • Feature/Architecture/automation Prioritization • Service management (CIMS, OMS, Scheduling service) • Problem solving • Debugging skills		
Education	JUNE 2022 Computer Science and Engr Bachelor of Technology NIT Jalandhar 8.51 CGPA	JUNE 2018 12 th Baba Gandha Singh Public School, Barnala CBSE 93.8%	JUNE 2016 10 th Baba Gandha Singh Public School, Barnala CBSE 10 CGPA
Achievements	Increff Success automation hackathon Winner • NCC C-Certificate holder • Codechef 5 star • LeetCode Knight • Bhangra Champion
